

AWS is good for Mississippi and great for Entergy customers

Amazon Web Services, a division of Amazon, is the world's most comprehensive and broadly adopted cloud computing service. Their data centers around the globe provide the digital infrastructure that powers how millions of people live, work and connect online every day.

Now, they're investing in Mississippi, bringing unparalleled benefits that will improve the lives of our communities for generations to come.

How will it benefit you?

High tech partner = Lower cost power

Amazon is paying 100% of the cost to extend electrical service to their new data center facilities so other customers aren't subsidizing their service.

Adding a large customer like Amazon's data center to the system will help Entergy Mississippi create **\$2 billion+ in benefits** for all its customers, including:

- **\$1.3 billion** in savings on new power generation costs by allowing Entergy to replace 50+ year-old units faster and get ahead of rising equipment costs due to global shortages.
- **\$700 million** in savings on future fuel costs by allowing Entergy to add newer, more fuel-efficient power generation stations to our fleet.
- **\$300 million** in projects to improve grid reliability for all customers made possible by AWS revenue, at no cost to other Entergy Mississippi customers.

MISSISSIPPI

AWS is a WIN for Mississippi

Bringing \$2 billion+ in savings for Entergy Mississippi customers

New jobs and investments for Mississippi

Being selected as the home of a data center project of this scale has cast Mississippi in a new, brighter economic development spotlight, helping it become a preferred destination for a new wave of high-tech industries. Construction and operation of the new facility will create:

- **4,000+** construction jobs during the multi-year development process.
- **1,000** new well-paying jobs with AWS in fields such as electricians, fiber optic technicians, engineers and more.
- **2,700+** indirect full-time jobs at local businesses across the state.

Community investment and charitable giving

The presence of Amazon data center operations in Mississippi will also bring new resources to support and uplift our communities, now and for generations to come. As part of the new data center project, Amazon has pledged:

- **\$200,000** in investments in new career and technical education programs for local elementary and middle schools.
- **\$250,000** in grants to support projects that improve the lives of Mississippians in underserved communities.
- **A new, first-of-its-kind training center** to prepare Mississippians for high-demand tech jobs.
- **Free workforce development** workshops and programs in partnership with local colleges and nonprofits.
